APM Command Center EMEA DevXChange

Florian Cheval APM Product Management 2016-05-12

Agenda

- ACC Goals
- What's in there today
- Long Term discussions

Focus Areas of APM Command Center

ACC can be distilled into 4 distinct areas

Diagnostics

View Information about Java Agents running within the environment

Remotely fetch Agent Log Files and other diagnostic information

Package diagnostics for upload to support ticket

Remotely change the Log Level on a single Java Agent

Configuration

Create configuration policies (tailored package)

API based package delivery

Audit trail of configuration changes

Ability to create configuration groups

Support for remote 'cold' and 'hot' configuration

Deployment

Ability to create packages tailored to the environment

Support for Field Packs in Agent Packages

Packages exposed via API for use by 3rd Party deployment tools

Cloud based store for Agent related packages

Health

Review the monitoring overhead of the agents

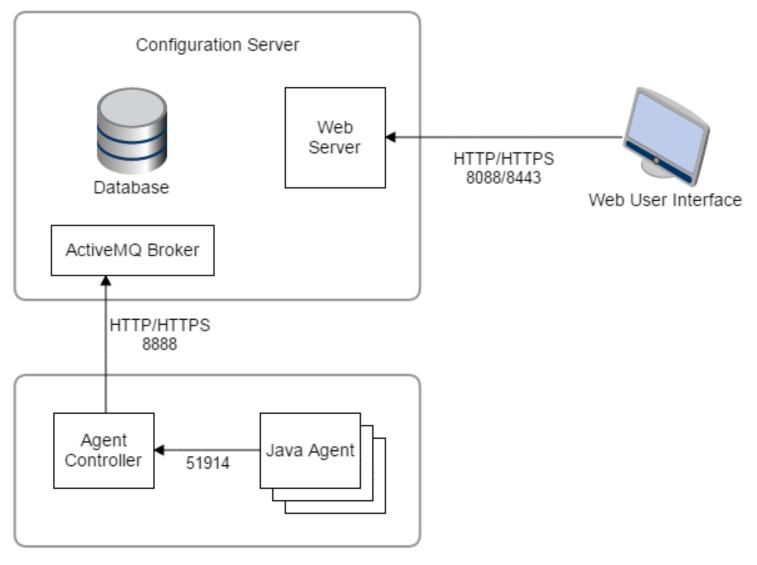

Report issues / errors with the monitoring

Suggest changes to the monitoring to reduce overhead

Suggest additional monitoring opportunities

Architecture

Demonstration of current capabilities

Ideas for the future

- Push package changes to Agents
- User Groups and Roles
- Agent Groups
- APM « Store »
- Broaden platform support (.NET, EPA, etc...)
- Overhead management
