CA IDMS™ Performance and Tuning

Education

EC801EN

caWorld'08 | discoverability

Abstract

> As access to CA IDMS systems increases from the web and distributed environments, performance is more important than ever. This full-day session focuses on the process of monitoring and tuning CA IDMS/DB and CA IDMS/DC systems to meet SLAs and other performance goals. Multitasking, zIIP processing, Data Sharing, and operating system features that improve total cost of ownership are also discussed.

Agenda

> Applications, Database design

> Benchmarks, Goals, Monitoring Tools

> Performance results of an un-tuned system

> SYSGEN changes

- Performance results

> Buffer changes

- Performance results

Agenda

> zIIP enabled

- Performance results

> Multitasking enabled

- Performance results

> zIIP and Multitasking enabled

- Performance results

> Summary

- Performance results

Agenda

> Parallel Sysplex features

> Health Checks

Applications and Access

> Access from VTAM (CA IDMS™/DC) and CICS

> CA IDMS/DC
- CA ADS™
- COBOL DML

> CICS
- COBOL Dynamic SQL
- COBOL DML

Database Design

> Records

- Account, History, Branch, Teller
  - 100,000 Accounts
  - 1,000 Branches
  - 10,000 Tellers
  - 1 History record inserted for each successful transaction

> Areas

- "Account History"
- "Branch Teller"

Application Design

> CA ADS

- OBTAIN CALC ACCOUNT
- MODIFY ACCOUNT
- STORE HISTORY
- OBTAIN KEEP OWNER WITHIN BRANCH-ACCOUNT
- MODIFY BRANCH
- OBTAIN KEEP TELLER WITHIN BRANCH-TELLER USING TELLER-NUMBER
- MODIFY TELLER

Application Design continued

> DC COBOL

- OBTAIN CALC ACCOUNT
- MODIFY ACCOUNT
- STORE HISTORY
- OBTAIN KEEP OWNER WITHIN BRANCH-ACCOUNT
- MODIFY BRANCH
- OBTAIN KEEP TELLER WITHIN BRANCH-TELLER USING TELLER-NUMBER
- MODIFY TELLER

Application Design continued

> CICS DML COBOL

- OBTAIN CALC ACCOUNT
- MODIFY ACCOUNT
- STORE HISTORY
- OBTAIN KEEP OWNER WITHIN BRANCH-ACCOUNT
- MODIFY BRANCH
- OBTAIN KEEP TELLER WITHIN BRANCH-TELLER USING TELLER-NUMBER
- MODIFY TELLER

Application Design continued

> CICS Dynamic SQL COBOL

- SELECT ACCOUNT_BALANCE, ACCOUNT_BRANCH
- UPDATE ACCOUNT
- INSERT HISTORY
- SELECT BRANCH
- UPDATE BRANCH
- SELECT TELLER
- UPDATE TELLER

Benchmark Runs

> 80,000 Transactions

- Online
  - CA ADS (30,000 Transactions)
  - COBOL (30,000 Transactions)
- CICS
  - COBOL DML (10,000 Transactions)
  - COBOL Dynamic SQL (10,000 Transactions)

Benchmark Run

> TPNS used to drive transactions

- IBM product
  - Teleprocessing Network Simulator

Goals

> Best Performance

- CPU Usage
- Response Time
  - Sub Second
- Throughput

Monitoring and Reporting

> Interactive (Real Time)

> Post processing

Monitoring and Reporting continued

> Interactive (Real Time)

- CA IDMS Performance Monitor (PMRM)
- DCMT COMMANDS
- OPER

Monitoring and Reporting continued

> Post Process

- CA IDMS Performance Monitor Reports
  - Application Monitor
  - Interval Monitor
- SREPORTS
- Real Time monitoring tools can also be used for Post Process monitoring
  - PMRM
  - PMIM

Real Time Monitoring (PMRM)

Abends, Deadlocks, and especially runaways are never a good thing.

Buffer waits need to be addressed.

TPNS Response Times

> Mean Response Time
- 8.00 Seconds (All Applications)
  - CA ADS 3.29
  - CICS DML 17.62
  - CICS SQL 18.38
  - DC COBOL 5.85

> Number of Responses
- 81,501

> Responses Per Minute
- 2,047

Agenda

- > Guidelines and Recommendations
- > System Statement
- > ADSO Statement
- > Program Definition Statement
- > Task Definition Statement
- > Line Definition Statement
- > Special Considerations
- > Operating System Considerations

Guidelines and Recommendations

> The values for parameters throughout this presentation fall into three categories:

- Best Setting
- Set then Tune
- Site specific Set then Tune

Guidelines and Recommendations continued

> Best setting

- These have been found to be the best setting for all sites and should not be changed

> Set then tune

- The values for these are initially set larger than needed. You should use these values and tune them down after running through a complete business cycle or through the busiest processing period

Guidelines and Recommendations continued

> Site specific Set then Tune

- These values when related to Storage and Program Pools should be set at a minimum to the values specified in the previous release. When upgrading you should set the values 10 to 20 percent higher then tune down after running through your busiest processing period
- These values when related to Maximum number of tasks and Maximum ERUS can only be determined by following a process of setting a value, monitoring response time, and adjusting up or down until the best values are found

System Statement

> Storage Cushion is

- 10 Percent of Storage pool is
- Best Setting

> Deadlock Detection Interval is 1

- Best Setting

> DPE Count is 1500

- Set then Tune

System Statement

> CHKuser task is
- Site specific
  - Set to anticipated Maximum number of concurrent external run unit connections

System Statement

> External wait is
- Site Specific
- Application Specific

System Statement

> No Journal Retrieval
- Best Setting

> Journal Fragment Interval is 0
- Best Setting

> Journal Transaction Level is 5
- Best Setting

System Statement

> Internal wait is
- Site specific
- Application Specific

System Statement

> Limits for Online/External are Off
  - Best Setting

System Statement

> Loadlist is SYSLOAD
  - Best Setting

System Statement

> Multiple enclave is
- Site Specific
- Application Dependent
  - See complete documentation in section x of the Programmers reference manual

System Statement

> Page Release is No
- No longer used in z/OS
- Dropped in Release 12.1 of CA IDMS

System Statement

> Protect

- Best Setting
- Several options available
  - Traditional Storage Protect
  - HPSP

System Statement

> Queue Journal Before

- Best Setting

System Statement

> RCE Count is 15000
  - Set then Tune

System Statement

> Recovery wait is
  - Site Specific

System Statement

> Relocatable Threshold is No
  - Best Setting

System Statement

> RESource timeout
  - Site specific

System Statement

> Retrieval Nolock
  - Best Setting

System Statement

> RLE Count is 15000
  - Set then Tune

System Statement

> Runaway interval is 5

- Best Setting

System Statement

> Rununits for 5

- Set and Tune

System Statement

> Scratch in XA Storage is Yes
  - Best Setting

System Statement

> Stacksize is 2000
  - Set then Tune

System Statement

> Statistics Interval Off
- Site specific

System Statement

> Statistics Interval Off
- Site specific

System Statement

> Statistics Interval Off
  - Site specific

System Statement

> Storage Key is
  - Specify "9" as the Storage key

System Statement

> Storage Key is

- Specify "9" as the Storage key

System Statement

> Storage Pool is 1200

- Set then Tune

System Statement

> Syslocks is 100000

- Set then tune

System Statement

> Systrace Off

- Best Setting
- Can be dynamically varied on and off
  - # of entries can also be changed
  - Maximum # entries can be higher than SYSGEN limit of 9999.
    - Higher number of entries does not affect performance

System Statement

> Ticker Interval is 1

- Best Setting
- Affects all other timer related functions
  - These other timer related functions will not execute lower than the ticker interval
    - Timer Tasks, Deadlock Detection Internal

System Statement

> Update Nolock

- Best Setting

System Statement

> Program Pool is
- Site specific Set then Tune

> Reentrant Pool is
- Site specific Set then Tune

> XA Program Pool is
- Site specific Set then Tune

> XA Reentrant Pool is
- Site specific Set then Tune

  When upgrading releases the size should be set to the size used in the older release.

System Statement

> Maximum ERUS and Maximum Tasks
- This number will represent the sum of:
  - System Tasks
  - Drivers Tasks
  - Max ERUS
  - Max tasks
- Values can be set high then dynamically changed using DCMT commands.
  - Total is highest value which can be set
  - Can vary lower (DCMT)

System Statement

> Maximum ERUS and Maximum Tasks

- Then monitor Response time and Throughput
- Adjust Max Tasks and Max ERUS
  - DCMT V AC TAS MAX TASK nnn
- Repeat until optimum number is found

System Statement

> XA Storage Pool is

- Site specific Set and Tune
- Best to over-allocate initially then tune using Statistics

ADSO Statement

> Dialog Statistics Off

- Site specific

ADSO Statement

> Fast Mode Threshold Off

- Best Setting

ADSO Statement

> Record Compression Off

- Best Setting

ADSO Statement

> Resources are Fixed

- Best Setting

ADSO Statement

> Storage Mode is Calculated
  - Best Setting

Program Definition Statement

> Nodynamic
  - Best Setting
  - Incorrect specification depending on the "LOADLIST" in use can have a major impact on performance

Program Definition Statement

> MP Mode is Any

- Best Setting
- Only applies when using the Multiasking option of CA IDMS

Program Definition Statement

> Noprotect

- Best Setting for production systems when traditional storage protection is being used.
- Traditional Storage protect is used if Protect is on at the System Level and the Storage Key parameter (of the System Statement) specifies a key in the range of 10 to 15
- Should only be turned on in a production system if Storage Overlays are suspected
- "Protect" on with traditional storage protection will result in significant increases of CPU usage

Program Definition Statement

> If High Performance Storage Protection is being used:

> Protect

- Best Setting for production systems
- Prevents User mode programs and dialogs from over-writing System programs and System storage
- No increase in CPU usage
- Non-Production systems should use Traditional Storage protection

Task Definition Statement

> Protocol is EXPresp

- Best Setting

Line Definition Statement

> Compact
  - Best Setting

Line Definition Statement

> Protocol is EXPresp
  - Best Setting

Line Definition Statement

> PermReadBuf
  - Best Setting

Line Definition Statement

> RPL Count is
  - 20 Percent of number of terminals
  - Set and Tune

Special Considerations

> Storage Pools

- XA Storage pool nnn
  - Split by types
    - TERMINAL, DATABASE
    - SHARED, SHARED KEPT
    - USER, USER KEPT
  - Pools must be split if High Performance Storage protection is being used
- Optional Apar bit 193 can be used to reduce CPU usage

Operating System Considerations

> CPU effectiveness

- Reported via:
  - DCMT D SUBT EFF
  - DCMT D SUBT n
  - IDMS Health Check - r17 with RO12080
- Reasons for low effectiveness
  - Paging, Swapping, Higher Priority Work

zIIP Exploitation

Education

EC801EN

zIIP Exploitation

> Progress to this point

Agenda

> Terms and Definitions
> Eligibility and Requirements
> Impact on existing dialogs and programs
> Implementing via IDMS Startup Parameters
> CPs, zIIPs, and Enclaves
> Benefits
> Monitoring
> Evaluating

Terms and Definitions

> zIIP
- IBM System z Integrated Information Processor
- z/OS software feature HBB7709 is required to use the zIIP feature

> CP
- General Purpose Processor

> TCB
- Operating System Task Control Block

> SRB
- Operating System Service Control Block

Terms and Definitions (cont.)

> Enclave
- An enclave is a representation of a business transaction or unit of work

> TCO
- Total cost of ownership

Eligibility and Requirements

> Loading of Nucleus Module, Line Drivers, Service Drivers, RHDCUXIT from Authorized Libraries

> Additional Authorized Libraries

Eligibility and Requirements (cont.)

> Rules for load module residence for zIIP

> Default activation

Eligibility and Requirements (cont.)

> Rules for load module residence for zIIP

> Default activation

Eligibility and Requirements (cont.)

> Rules for load module residence for zIIP

> Default activation

Eligibility and Requirements (cont.)

> Rules for load module residence for zIIP

> Default activation

Eligibility and Requirements (cont.)

> Rules for load module residence for zIIP

> Default activation

Eligibility and Requirements (cont.)

> Rules for load module residence for zIIP

> Default activation

Impact on existing dialogs and programs

> None

- All existing dialogs, programs of any language, will run in an environment containing zIIP processors without change or impact
  - Other than an overall reduction in CP CPU usage

Implementing via IDMS Startup Parameters

> Startup Parameters
- zIIP=Y (Default if zIIP parameter is omitted)
- zIIP=N
  - Do not use the zIIP feature

CPs, zIIPs, and Enclaves

> zIIP feature works with both Unitasking and Multitasking

> Unitasking
- 1 Enclave started for the single TCB (SCA) to be used

> Multitasking
- 1 Enclave started for each TCB (SCA) to be used
  - Doesn't depend upon the number of zIIPs installed
  - If six subtasks are started for multitasking
    - and only 1 zIIP is available on the machine
      - 6 enclaves are started

Benefits

> Reducing CP CPU usage
- Cycles offloaded to zIIP
- zIIPs are low cost engines

> Testing has shown benefits for all IDMS configurations and environments
- CICS DML, CICS SQL, DC ADS, DC COBOL, SERVER, etc
- As well as varying mixtures of the above configurations and environments

Multitasking in CA IDMS

Agenda

> What is Multitasking?
> Considerations
> Monitoring
> Benefits and costs

CA World '08

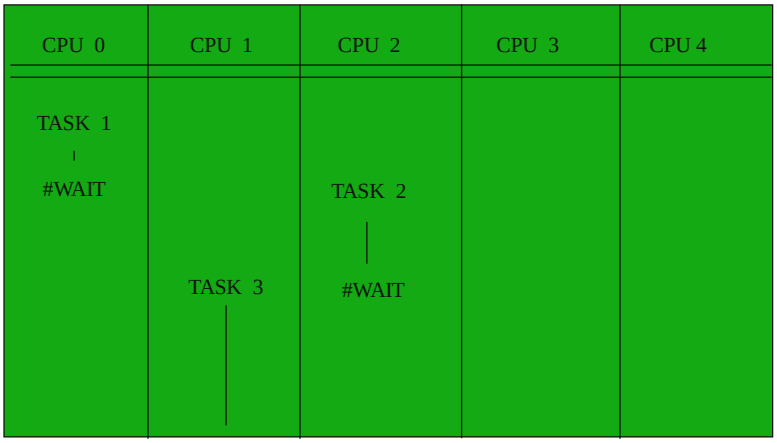
What is Multitasking

> Dispatching in a Unitasking system
> Dispatching in a Multitasking system
> Subtasks
> Modes
> RHDCMODE
> CA IDMS components in MPMODE ANY

CA World '08

What is Multitasking continued

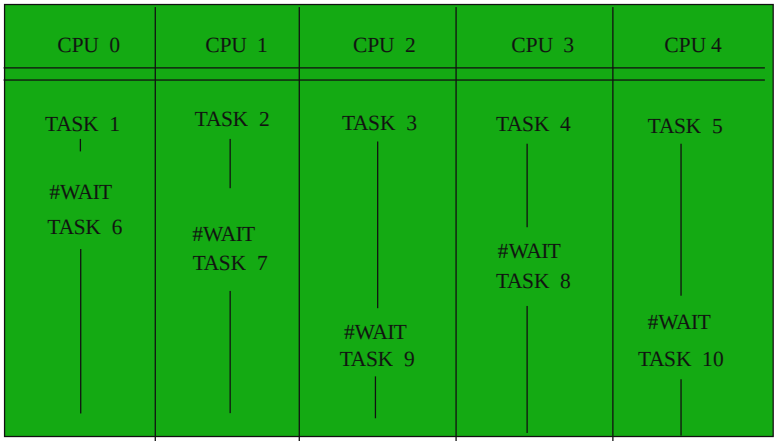
> Dispatching in a Unitasking system



caWorld'08

What is Multitasking continued

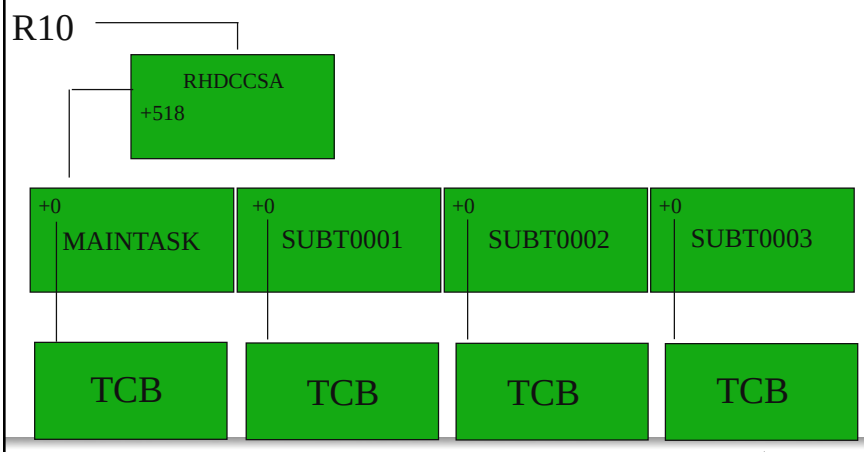
> Dispatching in a Multitasking system



caWorld'08

What is Multitasking continued

> Subtasks



CA World 08

What is Multitasking continued

> Modes

- ANY
- DC
- DB
- USER
- LOADER
- DRIVER
- CALLER

CA World 08

Transforming IT Management

What is Multitasking continued

> RHDCMODE (Mode Manager)

> Multitasking is:

- Not CPU driven
- Driven by number of tasks queued for System Services (Queue Depth)

What is Multitasking continued

> CA IDMS system components running in MPMODE=ANY

- Dispatcher
- Task-local functions
- Storage manager
- Scratch manager
- Database engine
- Security engine

Considerations

> Application Programming concerns
  - Shared Storage

caWorld'08

Considerations continued

> System Exits (RHDCUXIT)

> Database Procedures

caWorld'08

Considerations continued

> Considerations for the DBA

- Program definition statement
  - MPMODE is (ANY or SYSTEM)
  - Protect vs. NoProtect
  - Program pool sizes

Considerations continued

> Considerations for the DBA

- Affinity (Subtask)

Considerations continued

> Considerations for the DBA

- Invoking
  - Freeform parameter (recommended)
    - MT=Y,SUBT=n
  - Positional parameter
    - The letter "M" in the 21st position of the PARM statement following the System number

caWorld'08

Monitoring

> DCMT commands

- DCMT DISPLAY SUBTASK
- DCMT DISPLAY MPMODE
- DCMT DISPLAY MT Q DEPTH
- DCMT VARY MT Q DEPTH
- DCMT D SUBT EFF

> CA IDMS Performance Monitor

caWorld'08

Benefits and Costs

> Increased throughput and a reduction in response time

> The cost is a CPU increase that will vary from site to site

- Higher level of concurrence
- Handling of Multiple subtasks
- RHDCMODE

CA World 08

Re-Run with Multitasking option

Transforming IT Management

Abstract

This section discusses the Parallel Sysplex features available with IDMS. These features include Shared Cache, Data Sharing, Dynamic Run unit routing, and CV cloning.

Agenda

> Shared Cache

> Data Sharing

> Dynamic Database Session Routing

> CV Cloning

Shared Cache Definition

> Large, high-speed buffer in a Coupling Facility

> Contains database pages from files assigned to the cache and accessed by the CVs running in a Sysplex

> Cornerstone of the Coupling Facility features

> Used by ™ CA IDMS®/DB Data Sharing to allow multiple central versions to simultaneously update the same physical database

Shared Cache Implementation

> Define shared cache to the Coupling Facility

```
STRUCTURE NAME(IDMSSUPPCACHE002)        SIZE(5120)
PREFLIST(COUPLET1)
```

Shared Cache Implementation (cont.)

> DMCL Definition:

ALTER
DMCL R170DMCL

INCLUDE SEGMENT DBCR

DEFAULT SHARED CACHE IDMSSUPPCACHE002

Shared Cache Implementation (cont.)

> **DCMT VARY commands**

DCMT VARY SEGMENT NAME SHARED CACHE NAME/NO
DCMT VARY FILE NAME SHARED CACHE NAME/NO
DCMT VARY AREA NAME SHARED CACHE NAME/NO

DCMT Vary SHAred CAche cache-name ON/OFf

Shared Cache Tuning and Monitoring

> Tuning
- Increase shared cache size
- Define additional shared cache

> Monitoring
- DCMT
- CA IDMS Database Performance Monitor Option
- SREPORTS

Data Sharing Definition

> A data sharing group
- Named collection of CA IDMS/DB systems within a sysplex.
- Each CA IDMS/DB system associated with a data sharing group is referred to as a member of that group

> Data sharing and data sharing groups are the mechanisms that allow files to be open in update mode by all designated central versions

> Actual file data is maintained in the shared cache discussed earlier

Data Sharing Implementation

> Each data sharing group requires the definition of a list structure and a lock structure in the Coupling Facility

> One or more cache structures must be defined to share update access to data

> Definition in DMCL
- Default data sharing attribute
- Segment or file data sharing attribute

Data Sharing Implementation (cont.)

> Actual list and lock structure definitions:
- STRUCTURE NAME(CAIDMSSUPPGRP1LI) SIZE(4096) PREFLIST(COUPLET1)
- STRUCTURE NAME(CAIDMSSUPPGRP1LK) SIZE(5120) PREFLIST(COUPLET1)
- Sizes are in K bytes

Data Sharing Implementation (cont.)

> DMCL definition:

```
ALTER
DMCL R170DMCL
DATA SHARING DEFAULT SHARED CACHE
   IDMSSUPPCACHE002
        LOCK ENTRIES 100000 MEMBERS 5
        ON CONNECTIVITY LOSS NOABEND

INCLUDE SEGMENT DBCR
   DATA SHARING YES
   DEFAULT SHARED CACHE IDMSSUPPCACHE002
```

Data Sharing Implementation (cont.)

> Each member of the data sharing group requires SYSIDMS definition with

- DSGROUP
- DCNAME

```
//SYSIDMS  DD *
 DSGROUP=SUPPGRP1
 DCNAME=TECHD120
```

Data Sharing

> System Managed Rebuild
- For planned reconfigurations of the Coupling Facility

> System Managed Duplex Rebuild
- Provides Coupling Facility failure recovery capability

> Monitoring
- DCMT commands
- CA IDMS Performance Monitor
- JREPORTS

Coupling Facility Structures

> CA IDMS Visual DBA
- Modeling tool
- Uses CV's DMCL definition
- Generates Coupling Facility-ready syntax for:
  - Cache, List, and Lock structures

Data Sharing Benefits

> 24X7 processing
  - Fault Tolerance
  - System Maintenance
> Scalability
  - Additional CVs have update access to files
> Workload balancing
  - Additional update CVs can be started and stopped as needs change; work may be processed by any CV defined in the data sharing group
> Easy to implement and use

Dynamic Database Session Routing Definition

> Provides Workload balancing between CA IDMS/DB systems running in the Sysplex.

> Workload balancing is dynamic and based on actual system load

Dynamic Database Session Routing Implementation

DBGROUPs

> Backend Definitions

- Add DBGROUP statement(s) to Database Name Table
- Use "CREATE DBGROUP" statements to assign the Backend(s) to a DBGROUP(S)

```
CREATE DBGROUP R170DBTB.SPGROUP1 ENABLED
```

caWorld'08

Dynamic Database Session Routing Implementation (cont'd)

DBGROUPs

> Front-end Definitions

- You must define the DBGROUP as a node within the SYSGEN

```
ADD NODE SPGROUP1 GROUP DEFAULT NODE     TECHD120
```

- You can optionally map a DBNAME to a group by using the VIA "GROUP NAME" parameter of the Resource Table statement within SYSGEN

```
MODIFY RESOURCE TABLE
DBNAME IS DBCR VIA SPGROUP1.
```

caWorld'08

Dynamic Database Session Routing Implementation (cont'd)

> Coupling Facility considerations

- Define a Coupling Facility structure for each DBGroup defined to CA IDMS/DB
- Prefix DBGroup name with "CAIDMS"
- Size is in K bytes
- Example:

```
STRUCTURE NAME(CAIDMSSPGROUP1) SIZE(512)
PREFLIST(COUPLET1)
```

Dynamic Database Session Routing Implementation (cont'd)

> Work will be dynamically routed when one or both of the following are true:

- The DBNODE used is defined as a group via the NODE statement of SYSGEN
- The DBNAME used is defined in the Resource Table as a Group

> The DBNAME and/or the DBNODE are set by

- The application
- Via a DCUF SET command
- Via EXIT23

Dynamic Database Session Routing Implementation (cont'd)

```
TITLE 'EXIT 23 - PRE BIND EXIT'
XIT23      #MOPT ENV=SYS,AMODE=31,RMODE=ANY
XIT23      CSECT
XIT23EP1  #START MPMODE=ANY
           USING CSA,R10
           L    R2,4(,R1)                          40 BYTE DATA AREA
           USING PARMAREA,R2
           CLC   PSSCNAME(4),=CL4'DBCR'     IS THIS FOR DBCR
           BNE   RETURN                       NO! JUST EXIT
           MVC   PDBNODE,=CL8'SPGROUP1'   OVERRIDE DBNODE
***        MVC   PDBNAME,=CL8'DBCR    '      or  OVERRIDE DBNAME
RETURN    #RTN                                  RETURN TO CALLER
           LTORG
```

Dynamic Database Session Routing Implementation (cont'd)

```
      COPY         #CSADS
      PARMAREA DSECT
      PSSCNAME DS   CL8              SSC NAME
      PDBNODE   DS   CL8             DATABASE NODE
      PDBNAME   DS   CL8             DATABASE NAME
      PDICNOD    DS   CL8            DICTIONARY NODE
      PDICNAM    DS   CL8            DICTIONARY NAME
                 END
```

Dynamic Database Session Routing Implementation (cont'd)

> Monitoring
- DCMT commands
- LOOK
- CA IDMS Performance Monitor's Interval Component (online and Batch)

Dynamic Database Session Routing Benefits

> 24X7 processing
- Fault Tolerance
- System Maintenance

> Scalability
- Additional CVs have update access to files when used with data sharing

> Dynamic workload balancing
- Additional CVs can be started and stopped as needs change; work is routed to other CVs defined in the DBGroup

> Easy to implement and use

CV Cloning Definition

> Allows you to start multiple CVs that are copies (clones) of an existing CA IDMS/DB system

> System definition and files

- Same physical entities as the system being cloned with a few exceptions

CV Cloning Naming Conventions

> CV Number, DC System Number, VTAM APPLID, and System Node Name for a CV must conform to specific naming conventions

> By adhering to these naming conventions, CA IDMS/DB can implement clones without generating multiple physical copies of a system definition

CV Cloning Naming Conventions (cont'd)

> DC system number must match CV number

> Must be in range of 0 through 255

> All VTAM Applids must follow the convention of xxxxxnnn
  - xxxxx can be any five characters
  - nnn is the sysgen'd CV number and is overlaid at runtime with the number determined during start up of the cloned CV

CV Cloning Naming Conventions (cont'd)

> CA IDMS/DB system node names must follow the convention of *yyyyynnn*
  - where the first five characters (i.e., *yyyyy*) can be any characters you need to make the name unique within your environment
  - *nnn* is the number specified for the CV at system generation

```
SYSGEN 17.0 ONLINE   PAGE 1 LINE 1  DICT=SYSTEM
  ADD SYSTEM 120
    SYSTEM ID IS TECHD120
    CVNUMBER IS 120
    ADD LINE VTAM
    APPLICATION ID IS A31II120
```

CV Cloning

> Special File Requirements

- Each cloned CV requires its own copy of the following files:

DDLDCLOG, DDLDCSCR, DDLDCQUE, All Journals

CV Cloning (cont'd)

> Use the "CLON=" and "CLONES= " parameter in the JCL parm for the IDMS system startup.

```
//R170DC99 EXEC PGM=IDMSDC99,REGION=0K,TIME=1440,
//          PARM='S=110,CLON=Y,CLONES=9"
```

> When used in a data sharing group, a clone may have update access to all database files

CV Cloning Benefits

- 24X7 processing
  - Fault Tolerance
  - System Maintenance
- Scalability
  - Additional CVs have update access to files when used with data sharing
- Dynamic workload balancing
  - Additional CVs can be started and stopped as needs change; work is routed to other CVs defined in the DBGroup
- Easy way to add additional CVs
- No additional system definitions for the DBA to maintain

Agenda

> What are Health Checks?

> Why is CA implementing Health Checks?

> How can you activate CA IDMS Health Checks?

> Summary and Q & A

What are Health Checks?

> Detailed z/OS operating system messages which identify potential problems and what action to take

- Customers use information in messages to solve component or product configuration problems

> IBM Health Checker for z/OS

- Framework that allows you to run and manage Health Checks in your z/OS operating system
- Individual Health Checks are owned by a component or product
- Detailed messages
  - Can be viewed SDSF, HZSPRINT Utility, Health Check log stream, or CA SYSVIEW
  - Exceptions produce WTO messages

Why is CA Implementing Health Checks?

> The IBM Health Checker for z/OS is an important component of CA's Mainframe 2.0 strategy

- Reduce or eliminate operational problems and outages
- Ensure "best practices" are being followed
- Maximize product value
- Over 100 CA product health checks have been delivered since May 2009

caWorld'08

How to Activate CA IDMS Health Checks

> Setup and run IBM Health Checker for z/OS

- Provides the z/OS framework to run Health Checks
- Details in IBM Health Checker for z/OS Users Guide

> Setup and run CA Common Services Health Checker

- Provides shared infrastructure to register and run CA product health checks
- CA Common Services r11 PTF RI05071

> Download and install CA IDMS r17 SP1 Health Checks

- CA IDMS r17 PTF RO12080

caWorld'08

CA IDMS r17 Health Checks

> IDMS_SCRATCH_IN_MEMORY

- Medium level performance exception
- Run once at startup
- SCRATCH option is a best practice that can significantly improve performance.

CA IDMS Health Checks

Support.ca.com->IDMS home page-> Product News

caWorld'08

CA IDMS r17 Health Checks

> IDMS_CHANGE_TRACKING

- Medium level performance exception
- Run once at startup
- Use of SYSTRAK file for change tracking ensures that files are updated during WARMSTART

caWorld'08

CA IDMS r17 Health Checks

> IDMS_ZIIP_USAGE

- Medium level performance exception
- Run once every 24 hours
- Exploitation of zIIP processors is recommended to increase overall CPU throughput and operational costs

CA IDMS r17 Health Checks

> IDMS_CPU_EFFECTIVENESS

- High level performance exception
- Run at customer specified intervals. Default is 15 minutes
- CA IDMS is spending too much time waiting for CPU which could impact response time

Examples of CA IDMS Health Check Messages (Startup)
