# Why upgrade to Spectrum 10.2+?

The top five reasons are...
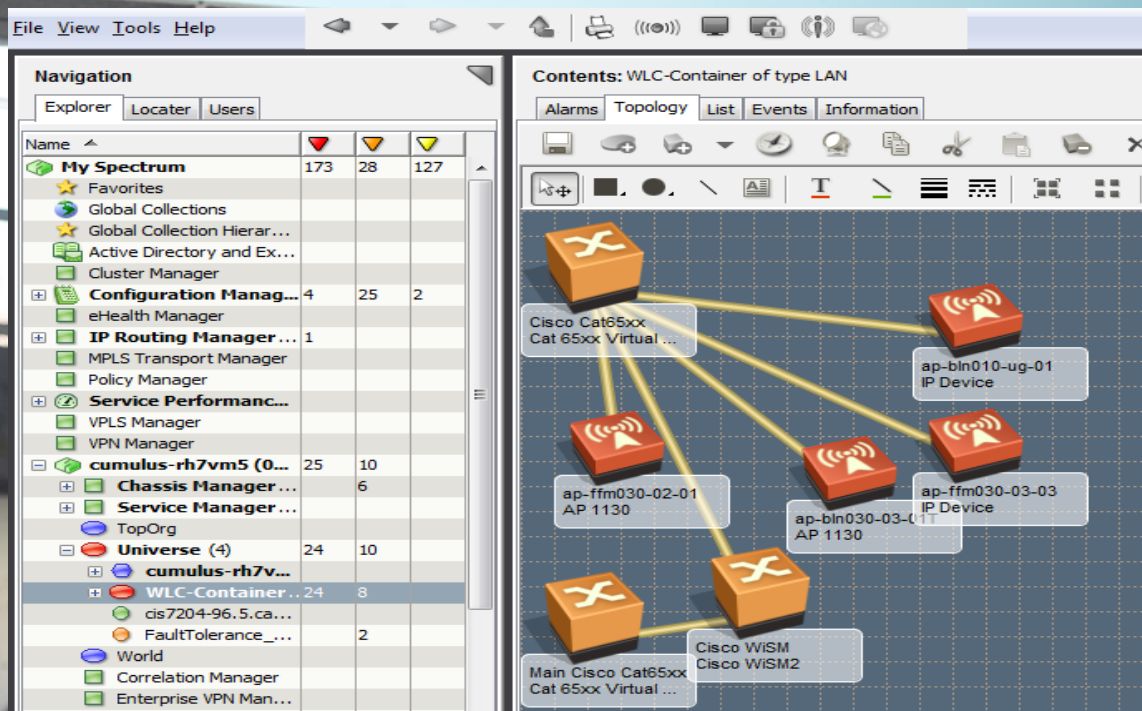

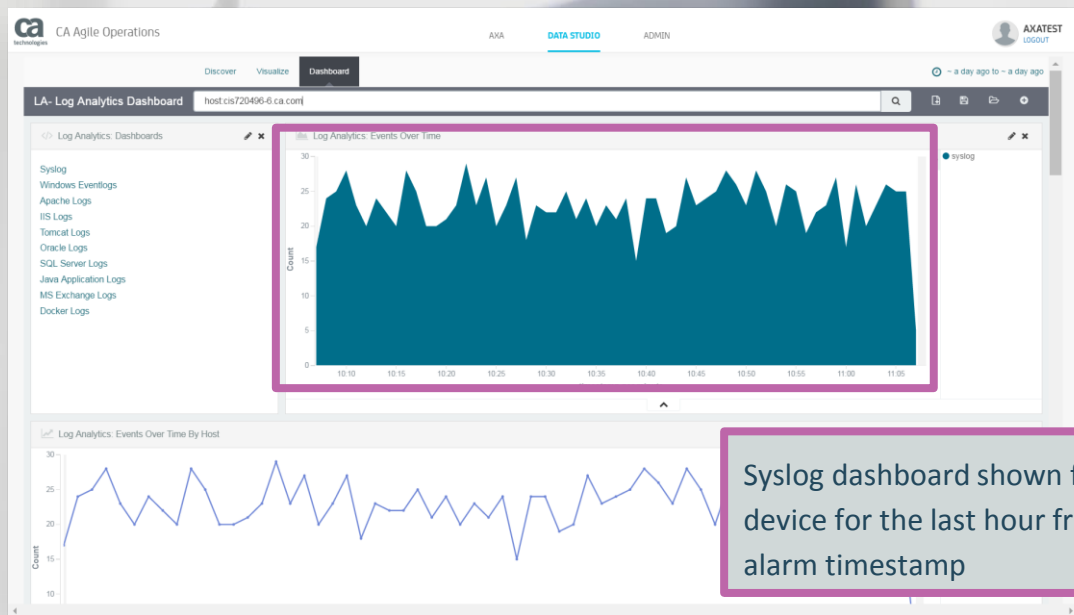

#1 WebClient Topology View

A new Topology View has been added to the WebClient. Operators now have a topology view while managing alarms and triaging problems.

#2 Wireless LAN Controller Manager

Spectrum will discover and monitor Cisco and Aruba Wireless LAN Controllers (WLC) and the connected Access Points (APs).

#3 Log Analytics

Syslog dashboard shown for the fault device for the last hour from the alarm timestamp

The CA Agile Operations analytics platform is a powerful new addition to the CA Agile Operation solution stack which is intended to be a single stop platform for logs and events from several CA products.

This release provides the alarms and inventory from CA Spectrum into the platform to provide analytics driven insights for CA Spectrum users.
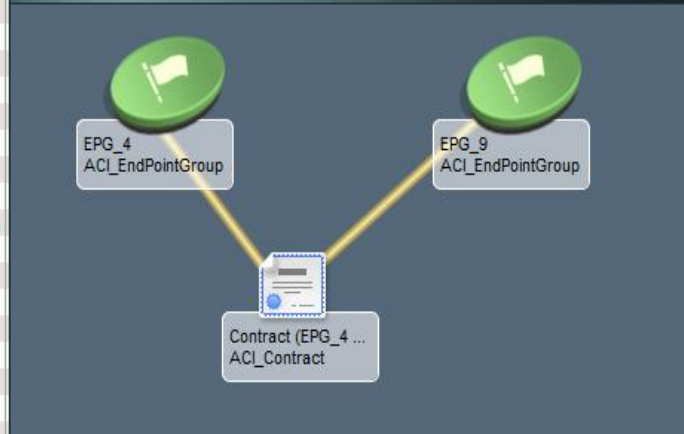

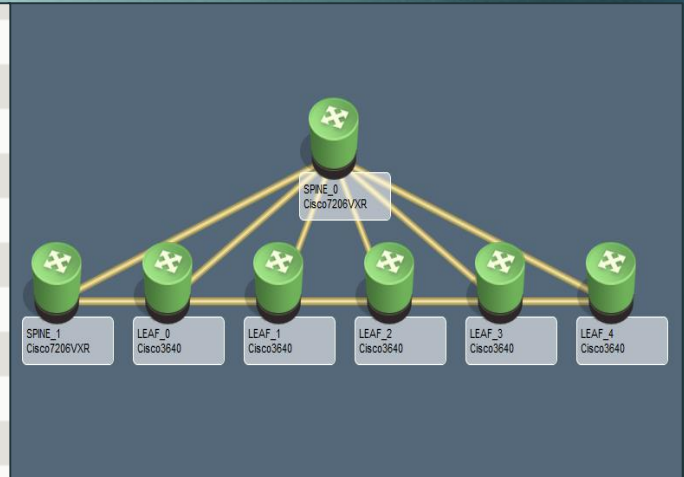

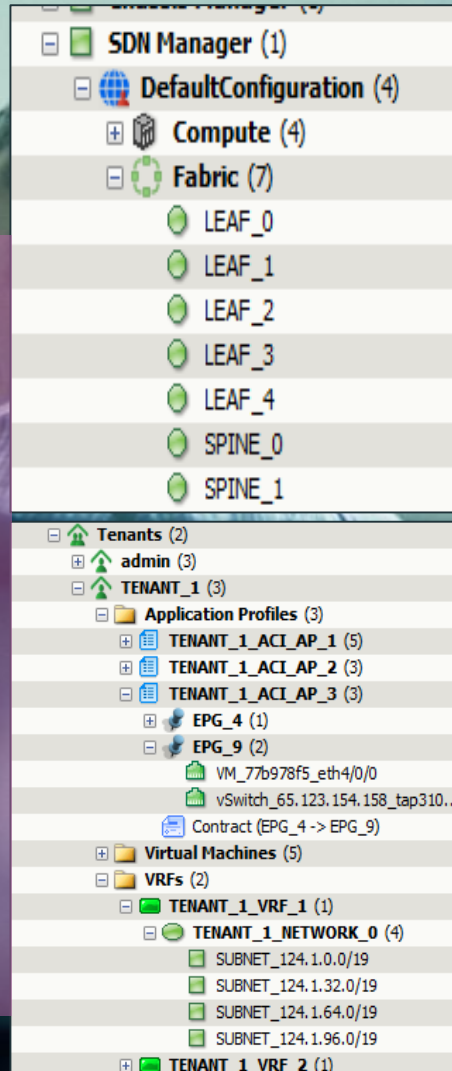

#4 Integration with CA UIM for Physical, Virtual and Cloud Monitoring

Enable fault management of your physical and virtual servers and network devices through a single solution.
CA Spectrum 10.2.1 enables AWS and Azure cloud management.

#5 Support Cisco ACI

CA Spectrum will discover, model and show Cisco ACI physical, virtual and logical entities in a single console.

Supporting alarms, traps, events, fault and health scores for root case and fault isolation.

CA Spectrum 10.2 / 10.2.1
