Q&A Session for CA Release Automation Community Webcast

Date: Wednesday, August 10, 2016

_____

-Shiva Tripathi - 11:32 AM

Q: how do we handle process based automation version management, especially in scenario where everything is treated as code?

    -Melanie Giuliani - 11:32 AM

    A: One of the things you'll see in our partner program is exactly that area. We are working on a unique offering that will allow you to do this and improve the way you can version the process as well as other areas of the product. To join our partner program, please sign the NDA and join our private community-

_____

-Ralf Huettl - 11:32 AM

Q: Is there some more information available about the TFS 2015 plugin? We're using vNext builds and like to execute an auto deployment with the build failed if the deployment failed...

    -Melanie Giuliani - 11:33 AM

    A: Yes - the plugin is available on the Microsoft marketplace. You can download the plugin and it contains everything you need - it addresses the scenario you've outlined-

_____

Brian Bobak – 11:33 AM

Q: Are all of the releases cumulative? We may want to skip some releases and catchup later.

    -Melanie Giuliani – 11:35AM

    A: The formal cadence is every 3 months, and we have cumulative releases every month. However, every release comes with all the cumulative features as part of the version. So, if you haven't caught up with previous releases, you can catch up by installing the most recent version. For instance, if you upgrade to 6.2 you will have all the features we delivered in the last couple of months.

_____

-Shiva Tripathi - 11:35 AM

Q: how do the product cope up with DB deployments

    -Melanie Giuliani - 11:36 AM

    A: we have several action packs that allow you to perform and run some scripts.-
