OpenMake Software release Version 2.1 of Remote Transport Interface (RTI) for Harvest v12.5 & 12.6

Chicago, IL – March 1, 2015 - OpenMake Software announced today the release of its latest version of RTI that is compatible with CA Harvest 12.5 and is currently being certified for Harvest release 12.6.

RTI is an interface that extends CA Harvest to allow it to seamlessly control code on many mid-range platforms (including IBM AS/400, OpenVMS and Tandem). End users work with CA Harvest in their usual way, with RTI taking care of the communication to the extended mid-range server base. This latest release supports the 64-bit versions of Harvest.

Concurrent with this release OpenMake Software is offering all purchasers of RTI 2.1 an early mover discount of 15% off list price to encourage customers to move with a firm order to the company by March 30th 2015.

About OpenMake Software

OpenMake Software delivers a model-driven, multi-platform DevOps Suite that gives you fast insight into the production readiness of your software build and ensures your release is in a shippable state at any point in your software life-cycle.
