

Virtual Test Data Manager

Test Data Virtualization On Demand

vTDM: Powerful New Functionality – Included with Your TDM License!

Get instant access to virtualized test data. Streamline test cycles and ensure every team member has on-demand access to virtualized test data, when they need it, with virtually no wait time or storage footprint.

Test Data is a Bottleneck

- Many development teams have implemented two-week sprints as part of their Agile development efforts. However, it often takes longer than two weeks to get the test data needed for that sprint. ***What if testers could get the data they need in timely fashion?***
- Testers are constantly tripping over each other's efforts as they use a single shared copy of data for their testing. ***What if each tester could have their own copy of test data?***
- Creating and maintaining multiple copies of test data uses expensive storage and compute resources. ***What if you could create multiple copies of test data at minimal cost?***

vTDM is the Solution

vTDM can help resolve all these challenges. CA Virtual Test Data Manager reduces data volumes, test durations, and costs; and enables teams to deliver applications to market faster.

- Specifically vTDM:
 - Delivers virtual copies of test data, on demand, in seconds
 - Eliminates the need for subsetting a database

How Does vTDM work?

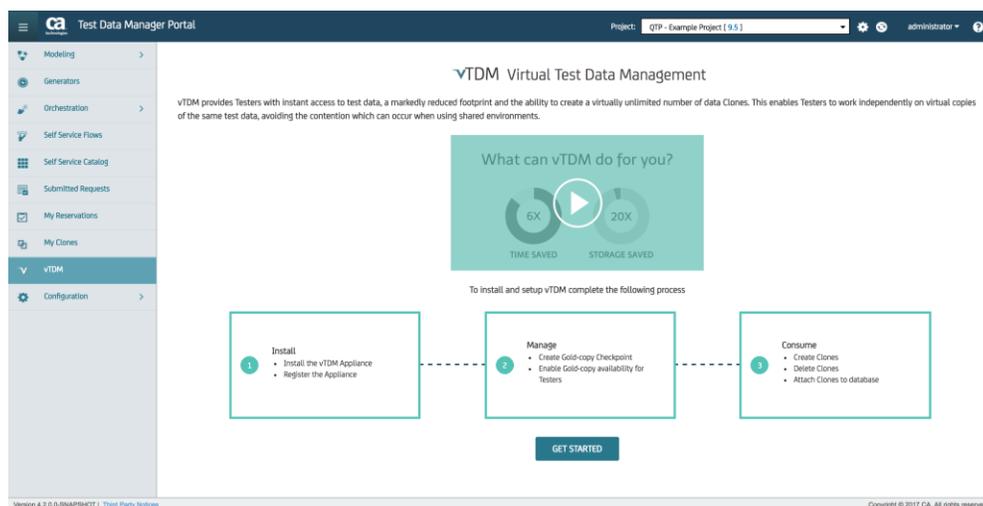

vTDM quickly creates virtual copies of large test data sets, allowing each tester to instantly access their own “personal copy” of test data, on-demand, using very little disk space. vTDM eliminates storage overhead and wait times for data, and ensures data provisioning is streamlined into your continuous testing workflow.

With vTDM You Will Gain...

- Markedly reduced footprint for each tester to have their own full environment
- Gives testers instant access to all the data – no delays
- Virtually unlimited number of data copies (clones) for each tester, unrestricted by data reservation
- Provides a quicker path to deploying test data to your testers within CA TDM
- Provides a powerful, simple self service interface directly to testers

Get Started Today with vTDM QuickStart

vTDM is included with your CA Test Data Manager License. And, for a limited time, CA is offering our valued TDM customers a special onboarding program, vTDM QuickStart. With vTDM QuickStart, CA services will schedule personalized meetings to get your team set up and using vTDM, at no cost to you. In addition, we can offer additional licenses, as needed, to allow your organization to fully evaluate the functionality and game-changing capabilities in vTDM. To learn more and get started today, contact your sales representative.

vTDM Virtual Test Data Management

vTDM provides Testers with instant access to test data, a markedly reduced footprint and the ability to create a virtually unlimited number of data Clones. This enables Testers to work independently on virtual copies of the same test data, avoiding the contention which can occur when using shared environments.

What can vTDM do for you?

6X TIME SAVED 20X STORAGE SAVED

To install and setup vTDM complete the following process

- 1. Install**
 - Install the vTDM Appliance
 - Register the Appliance
- 2. Manage**
 - Create Gold-copy Checkpoint
 - Enable Gold-copy availability for Testers
- 3. Consume**
 - Create Clones
 - Delete Clones
 - Attach Clones to database
