

## Q&A Session for DevTest Community Webcast

Date: Tuesday, January 10, 2017

---

-Ralph Nelson - 11:15 AM

Q: If we publish a single job to two servers, will the data be identical?

-Wilfred Mathanaraj - 11:17 AM

A: as long as we use randlov or seedlist we do randomise it-

-Ralph Nelson - 11:17 AM

Q: ok, thank you

---

-Harish Goteti - 11:30 AM

Q: If the publish action is tied to a Javelin flow, will repeat count trigger multiple Javelin workflow jobs?

-Melanie Giuliani (transcribing Rama's verbal answer) - 11:35 AM

A: in the catalog which rama showed to publish, if you have an action associated to the publish, it would only trigger once-

---

-Steve Richards - 11:39 AM

Q: What functionality has still not been ported to the TDM Portal? Do we have a list of when DM should be used and when the Portal should be used - this would be helpful when designing solutions.

-Melanie Giuliani (transcribing Wilfred's answer) - 11:45 AM

A: for the majority of the functionality is all ported over. there are some minor implementations that have not been ported over. We do have a list that Wilfred will post to the communities.-

---

-Srini S - 11:39 AM

Q: Hi Rama, I have created a Javelin workflow for Oracle table updates with a variable file. can this be triggered from portal as it is an update action instead of a publish job?

-Ramakrishna Kavikondala - 11:41 AM

A: It should work if you have the connection profile defined in the Javelin flow-
