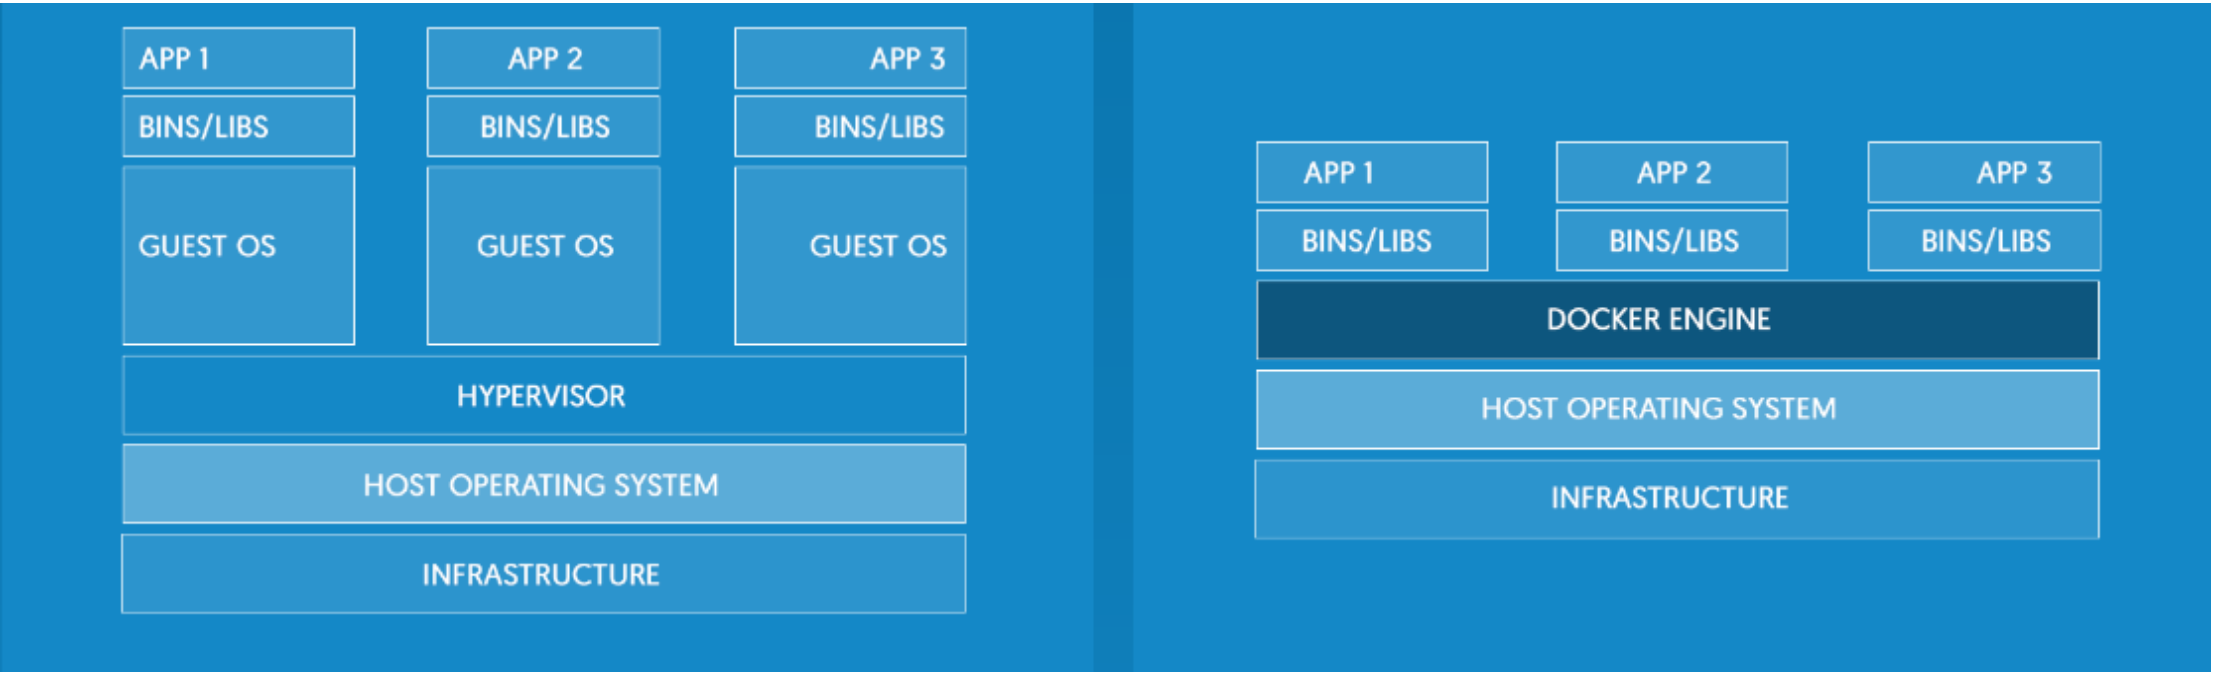
What is Docker?



- Open Standards
- Lightweight
- Secured
- Quickly Scale

© 2016 CA. ALL RIGHTS RESERVED.

Why CA Service virtualization support for Docker?

- CI/CD – create/test Virtual Services
- Performance Testing
- All containers on a single box or individual containers on separate boxes
- Deploy containers –
  - on prem
  - In the cloud
  - On Hybrid

Prerequisites For Docker Support

- Full version of Linux that supports Docker features
- Docker already installed
- DevTest Linux installer (8.3 and above)
- Understanding of Linux
- Understanding of Docker!

Docker Images

- Docker subfolder under DevTest_Home folder
- Run ***gradlew build*** command to build all images

```
~# docker images

Docker Images

- Examples/dradis-licensed folder has prebuilt image ‘dradis-licensed’ (for Enterprise Dashboard)
- Copy your license file to that folder

```
[root@warko0111915 dradis-licensed]# cp ../../../devtestlic.xml .
[root@warko0111915 dradis-licensed]# cat README.md
```

- Build this image which applies the license file and creates a new layer

```
[root@warko0111915 dradis-licensed]#  docker build -t dradis-licensed:latest .
Sending build context to Docker daemon 5.632 kB
Step 0 : FROM devtest/dradis-base
